

Project Design Phase-II

Data Flow Diagram & User Stories

Date	08 March 2026
Team ID	
Project Name	Electric Vehicle Data Analytics and Visualization using Tableau
Maximum Marks	4 Marks

Data Flow Diagrams:

The Electric Vehicle Analytics System collects data from electric vehicles such as battery level, charging time, location, and driving range. This data is processed and stored in a centralized database. The Tableau visualization tool analyzes the data and presents it through interactive dashboards. These dashboards help different users such as city planners, fleet managers, and EV consumers understand charging patterns, battery performance, and vehicle efficiency to make informed decisions.

Level-0 Data Flow Diagram (DFD) of the EV Analytics System

The Level-0 Data Flow Diagram shows how data moves through the Electric Vehicle Analytics System. Data from EV vehicles and charging stations is first collected by the data collection system. This information is then stored in the EV database for further processing. The processed data is analyzed using a Tableau dashboard to generate useful insights. These insights help users such as city planners, fleet managers, and EV consumers understand charging patterns, battery performance, and vehicle efficiency for better decision-making.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
City Energy Planner	Charging Pattern Analysis	USN-1	As a city energy planner, I want to analyze EV charging patterns so that I can understand peak electricity demand.	The dashboard should display charging time, location, and energy consumption.	High	Sprint-1
Fleet Manager	Battery Performance Monitoring	USN-2	As a fleet manager, I want to monitor battery performance and driving range so that I can manage my vehicles efficiently.	The dashboard should show battery health, state of charge, and predicted driving range.	High	Sprint-1
EV Consumer	EV Model Comparison	USN-3	As a potential EV buyer, I want to compare different EV models so that I can choose the most efficient and affordable vehicle.	The dashboard should show range, charging cost, and efficiency comparison.	Medium	Sprint-2
System Administrator	Data Management	USN-4	As an administrator, I want to manage and update EV data so that the analytics dashboard always shows accurate information.	The system should allow data updates and ensure data accuracy.	Medium	Sprint-1
